

## KXT – Mineral Trapezoidal Jigs

KXT-- jigs is kind gravity recovery equipment. Jigs have had long and successful history in the recovery of gold, diamonds, gemstones, and other minerals. It are highly recommended by many operators because they provide superior gold recovery in situations where fine gold or black sands are present in significant quantities. Jigs also permit secure, continuous clean up of concentrates. Recent improvements in engineering and design have led to a resurgence of their use in modern mining operations.

Since 1995, three models have been developed. The recovery for the placer gold is expected up to 95% . the recovery for the lode ore gold is expected Up to 85% . The equipment is patented in China.

Model	Power (kW)	Capacity (t/h)	Water consumption (m <sup>3</sup> /h)	Weight (Kg)
KXT25	0.55	2-4	3-6	190
KXT50	1.1	5-10	6-12	370
KXT100	2.2	15-30	24-30	920
